Dataset 1 :-

```
import pandas as pd

customer_info = {
    'Customer_ID':['C101','C102','C103','C104'],
    'Customer_Name':['Asha','Ravi','Neha','Aman'],
    'Age':[25,30,28,35],
    'City':['Delhi','Mumbai','Bangalore','Delhi']
}

df_customers = pd.DataFrame(customer_info)
df_customers
```

	Customer_ID	Customer_Name	Age	City
0	C101	Asha	25	Delhi
1	C102	Ravi	30	Mumbai
2	C103	Neha	28	Bangalore
3	C104	Aman	35	Delhi

Next steps: Generate code with df_customers New interactive sheet

Dataset 2:-

```
purchase_data = {
    'Customer_ID':['C101','C102','C103','C101','C104'],
    'Product':['Laptop','Mobile','Tablet','Mobile','Laptop'],
    'Quantity':[1,2,1,1,1],
    'Price':[60000,30000,20000,30000,60000]
}

df_purchases = pd.DataFrame(purchase_data)
df_purchases
```

	Customer_ID	Product	Quantity	Price
0	C101	Laptop	1	60000
1	C102	Mobile	2	30000
2	C103	Tablet	1	20000
3	C101	Mobile	1	30000
4	C104	Laptop	1	60000

Next steps: Generate code with df_purchases New interactive sheet

```
df_purchases['Total_Amount'] = df_purchases['Quantity'] * df_purchases['Price']

df_purchases
```

	Customer_ID	Product	Quantity	Price	Total_Amount
0	C101	Laptop	1	60000	60000
1	C102	Mobile	2	30000	60000
2	C103	Tablet	1	20000	20000
3	C101	Mobile	1	30000	30000
4	C104	Laptop	1	60000	60000

Next steps: Generate code with df_purchases New interactive sheet

Integrating both the datasets

```
df_merged = pd.merge(df_customers, df_purchases, on='Customer_ID')

df_merged
```

	Customer_ID	Customer_Name	Age	City	Product	Quantity	Price	Total_Amount
0	C101	Asha	25	Delhi	Laptop	1	60000	60000
1	C101	Asha	25	Delhi	Mobile	1	30000	30000
2	C102	Ravi	30	Mumbai	Mobile	2	30000	60000
3	C103	Neha	28	Bangalore	Tablet	1	20000	20000
4	C104	Aman	35	Delhi	Laptop	1	60000	60000

Next steps: Generate code with df_merged New interactive sheet

Find Total Spending of each custome

```
total_spending = df_merged.groupby('Customer_Name')['Total_Amount'].sum()

total_spending
```

Customer_Name	Total_Amount
Aman	60000
Asha	90000
Neha	20000
Ravi	60000

dtype: int64
